## 斐讯k2g刷OpenWRT系统指南与故障

来源: 本站 添加时间: 2022-05-05 点击:

手里有两台斐讯K2G干兆路由器,想刷openwrt固件,22.3.0固件在斐讯K2g上有bug: 刷入后无法启动,lan口下的终端获取不到ip,或者重启配置丢失等问题,经测试19.01.10比较稳定

### 先列几个网站

Openwrt官网 https://www.openwrt.org

清华大学镜像源 https://mirrors.tuna.tsinghua.edu.cn/openwrt/

清华镜像镜像源适合K2G的固件

https://mirrors.tuna.tsinghua.edu.cn/openwrt/releases/19.07.10/targets/ramips/mt7620/openwrt-19.07.10-ramips-mt7620-phicomm k2g-squashfs-sysupgrade.bin

本文参考这个链接 https://www.upantool.com/sense/luyougi/13263.html

不死breed 下载 https://breed.hackpascal.net/breed-mt7620-phicomm-psg1208.bin (注:这个breed固件是k2p专用的,目前没有k2g专用的,此固件可以在K2g上使用,但是端口全部变成百兆了)

1.1首先是下载 openwrt 镜像包,怕下载错,最好的办法是官网 通过 设备型号 搜索固件

Next stable series: OpenWrt 22.03

The OpenWrt Community is proud to present the OpenWrt 22.03 stable version series. It is the  $\,$ 

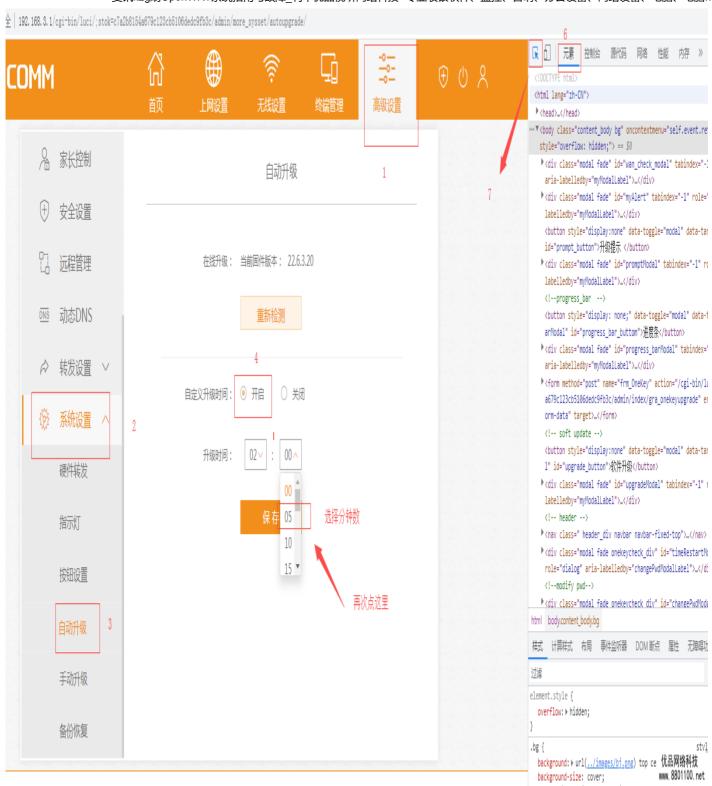

The OpenWrt 22.03 series focuses on the migration from iptables based firewall to the nftables

Next Stable Release - OpenWrt 22.03.0-rc1

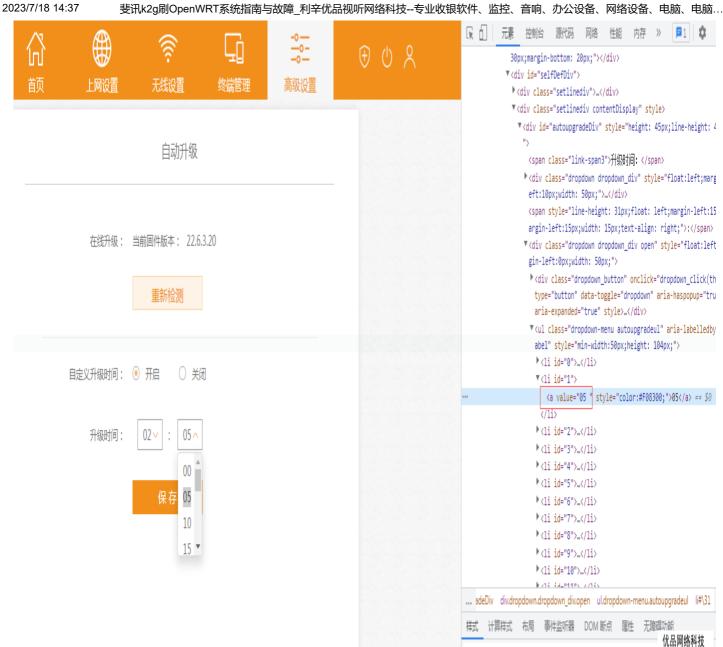

The current stable version series of OpenWrt is 22.03, with v22.03.0-rc1 being the first release

2.1一定要用chrome 浏览器进入路由器,准备开启k2g的telnet服务,安装下图操作

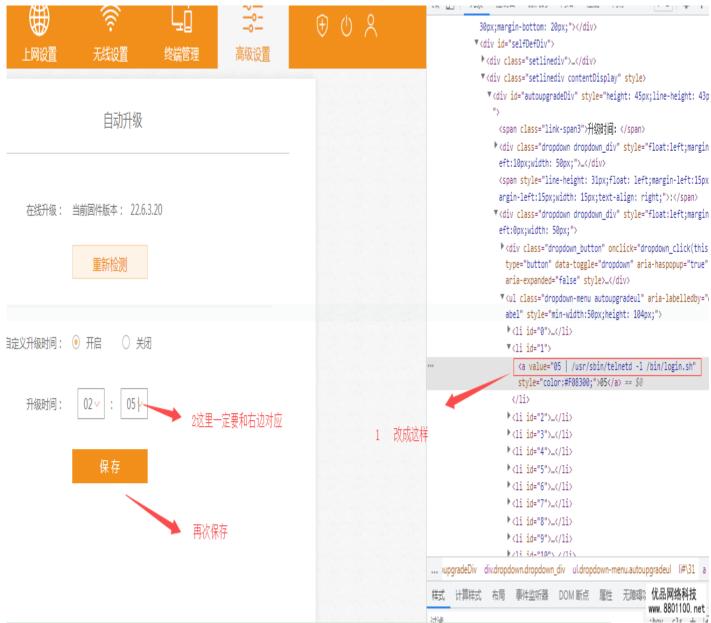

2.2 可以看到下图是POST的数据内存,修改分钟数05的value内容为05 | /usr/sbin/telnetd -l /bin/login.sh

过滤

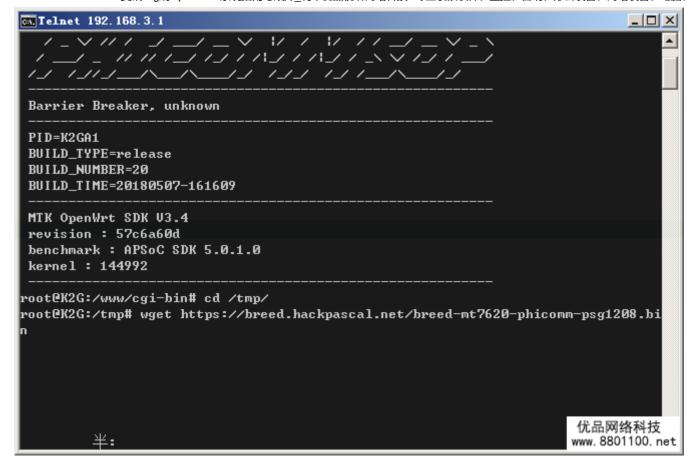

进行修改,修改后保存

www. 8801100. net

2.3 通过电脑上的telnet客户端 进入斐讯路由器,再进入/tmp目录,下载不死breed,使用如下命令#cd /tmp

#wget https://breed.hackpascal.net/breed-mt7620-phicomm-psg1208.bin

2.4 解锁Bootload使用如下命令,并且把breed刷入Bootloader #mtd unlock Bootloader 收到如下回复 说明 解锁成功 Unlocking Bootloader #mtd -r write breed-mt7620-phicomm-psg1208.bin Bootloader

```

                                                                                                                                                resolv.conf
resolv.conf.auto
                                                                                                luci-indexcache
                                                                                                 luci-modulecache
breed-mt7620-phicomm-psg1208.bin ho
root@K2G:/tmp# mtd unlock Bootloader
Unlocking Bootloader ...
root@K2G:/tmp# mtd -r write breed-mt7620-phicomm-psg1208.bin Bootloader
                                                                                                                  本机已下载breed
下载breed需要wan口也连接
路由器能够联网
Unlocking Bootloader ...
Writing from breed-mt7620-phicomm-psg1208.bin to Bootloader ...
Rebooting ...
Connection closed by foreign host.
```

2.5 等待路由器重启, breed已经刷入

**2.6**进入 **bredd**:把**K2**g断电,按住**reset** 按钮不松,通电**5**秒后松手 **breed**的默认网址是**192.168.1.1** 

2.7刷入openwrt 19.7.10固件,内容布局一定要选择 斐讯,否则openwrt启动不成功,点击上传

# Breed Web 恢复控制台

优品网络科技 www.8801100.net

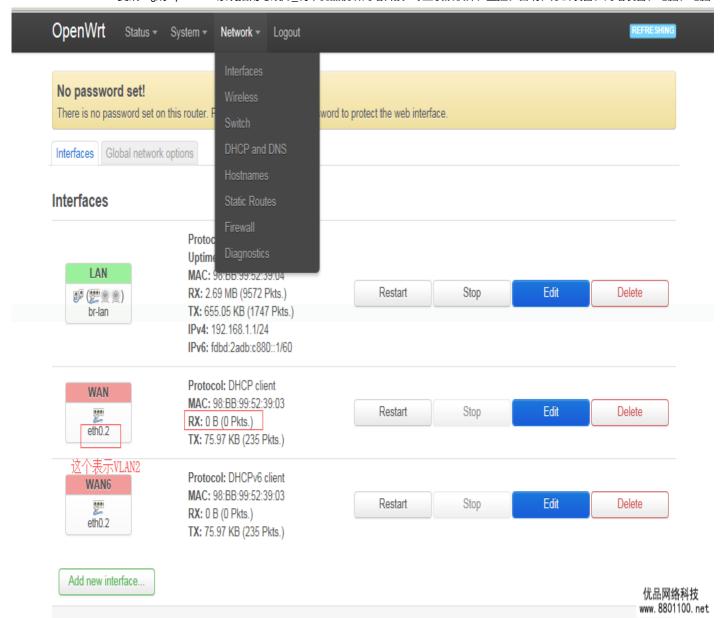

2.8 点击更新,等待重启进入 openwrt系统

# Breed Web 恢复控制台

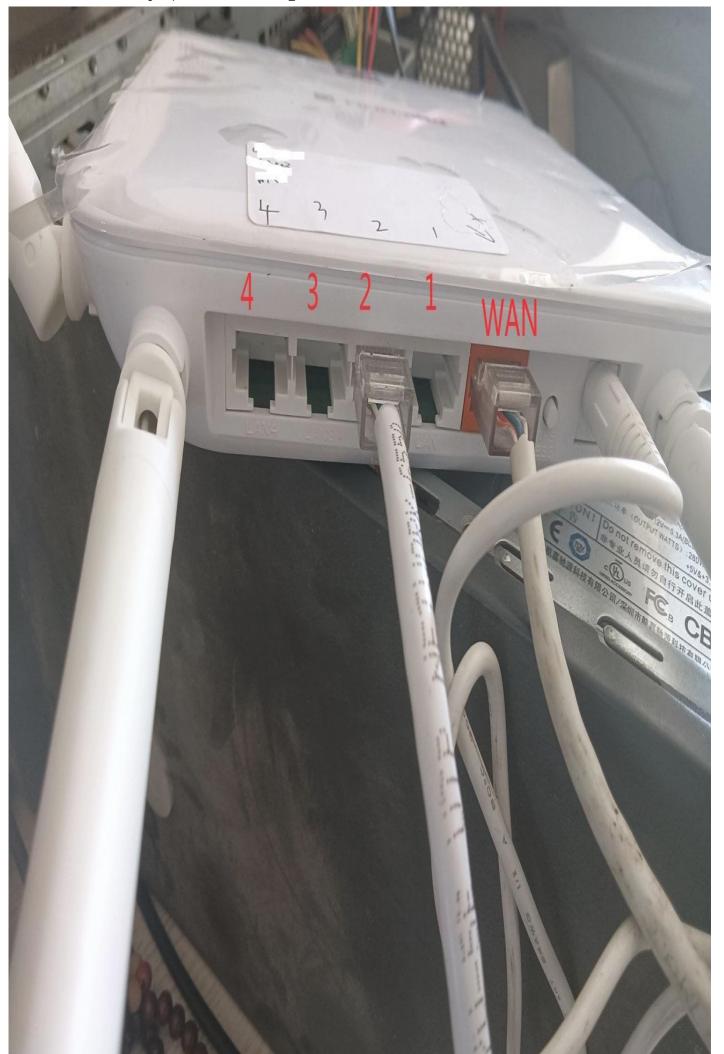

3.2 通过NETWORK->Interfaces查看端口状态,发现WAN口 RX数据为0,也获取不到IP地址,刚开始我以为是固件为题,更换其他版本固件也无法解决

优品网络科技 www.8801100.net

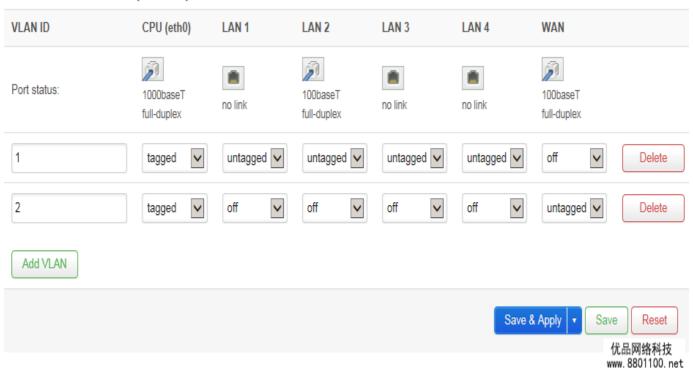

### 3.3路由器实际插线图

## VLANs on "switch0" (mt7620)

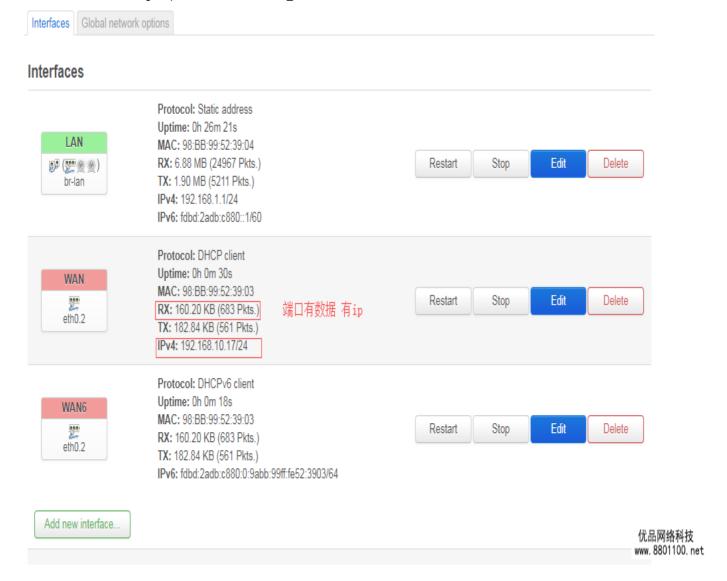

3.5禁用LAN口,并且设置LAN口左边一个口为WAN口。LAN口左边一个口,路由器上标的是端口4,在Openwrt 里面是lan1.如图设置后保存应用。

## Switch

The network ports on this device can be combined to several VLANs in which computers can communicate directly with each other. VLANs are often used to separate different network segments. Often there is by default one Uplink port for a connection to the next greater network like the internet and other ports for a local network.

3.6查看WAN口状态,发下WAN口已经有数据,且获取到IP地址

关于openwrt如何设置WAN口,如何设置wifi名称命名,如何开启中文等这里就不描述了,网上教程很多

#### 下面是遇到的问题FAQ

- 1.Bread刷入工具只适合k2,k2p,对于k2g无效
- 2.由于bread版本较老,所有原有的干兆端口现在被识别为百兆端口
- 3.开启telnet如果失败,换一个分钟数重新设置。路由器在刷入bread之前重启了,那么启动斐讯固件后telnet服务又关闭了,需要开启只能选择别的分钟数重新开启。
- 4.openwrt 22.3.\*版本在k2g上运行有故障 (LAN口下终端获取不到ip,配置重新不保存等)
- 5.openwrt 内WAN口无法正常使用,这个问题困扰了我一天,各种找原因,后来想到换口才解决问题
- 6.openwrt显示的端口号和硬件上标注的不一致,这个需要注意
